

Cross-Type Strategy Mismatch Matrix

Rows = applied strategy; columns = true failure type. Cell color shows Δ vs target-type control.

Applied strategy	Edit ctrl 1.68	Loc ctrl 1.70	Logic ctrl 1.97	Plan ctrl 1.88
Edit reread_file	2.68 (+1.00)	1.00 (-0.70)	1.33 (-0.64)	1.12 (-0.76)
Loc broaden_search	1.39 (-0.29)	1.93 (+0.23)	1.80 (-0.17)	1.50 (-0.38)
Logic minimal_fix	1.42 (-0.26)	1.20 (-0.50)	2.13 (+0.16)	1.38 (-0.50)
Plan step_back	2.60 (+0.92)	2.00 (+0.30)	2.33 (+0.36)	2.75 (+0.87)

Key finding: 9/12 off-diagonal applications fall below control; step_back is the only safe mismatch row.

harm

no harm

attached to target type

Black outline = attached to target type. Values are recovery scores with Δ against that target type's control.
